Introduction

The Teratogenic Medications Order Check Interim Solution was originally released as VistA patch PXRМ*2*22 in July 2012. The interim solution is intended to have regular updates for clinical content, primarily to add newly approved medications with FDA Pregnancy Categories that warrant an order check. This patch, PXRМ*2*51 represents the second such update. Included in this update are new medications, order check text changes consistent with the Notification of Teratogenic Medications project, and updates to the taxonomies that define a women's medical inability to conceive a pregnancy including the introduction of SNOMED codes to those taxonomies.
