2 Introduction

Patch PXRM*2.0*57 releases a new reminder dialog template to the field, without any changes to routines, data dictionaries, or other package functions; it deals with content only. The new reminder dialog template is:

VA-ADVANCE DIRECTIVE NOTIFICATION AND SCREENING.

This reminder dialog template is mandated for installation, but optional for use. While use of the reminder dialog template is optional, all sites are required to use two of the health factors exported by this template/patch. All sites will have to include the health factors, "Advance Directive Yes" and "Advance Directive No", in their advance directive notification and screening processes as required by the <u>Veterans Health Administration (VHA) Handbook</u> 1004.02, "Advance Care Planning and Management of Advance Directives." The use of this template and the associated health factors will help sites comply with the advance directive notification and screening requirements set forth in this Handbook.

Facilities will be required to install this template within normal installation timelines as established by OIT. The National Center for Ethics in Health Care (NCEHC) is the Program Office with oversight of this template and its associated processes.

Sites may wish to associate this reminder dialog template with the local and national enterprise standard progress note title, "ADVANCE DIRECTIVE NOTIFICATION AND SCREENING."

Multiple installation steps will be required for this patch installation, and some actions will be optional. These actions should to be accomplished in your VistA/CPRS test account and then transitioned to your live account after successful testing.

These processes are outlined in the following guidance, but an overview is provided here:

- **Pre-Installation**. If your site has locally developed the two health factors, ADVANCE DIRECTIVE YES and ADVANCE DIRECTIVE NO, then you will have to take some preinstallation actions to modify these local health factors to allow for their national health factor equivalents to be installed via this patch. If not, the local health factors will be overwritten by the installation of the national health factors delivered in this patch.
- **Post-Installation**. Sites will need to ensure that the nationally delivered health factors, ADVANCE DIRECTIVE YES and ADVANCE DIRECTIVE NO, are incorporated into local processes for documenting Advance Directive Notification and Screening, as required by VHA Handbook 1004.02, Advance Care Planning and Management of Advance Directives.

Health Factor Set Up. If your site has <u>locally developed and installed the two health factors</u>, <u>ADVANCE DIRECTIVE YES and ADVANCE DIRECTIVE NO</u>, then you will have to take some pre-installation actions to modify these local health factors, changing their names, to allow for the installation of the national versions of these health factors via this patch. (***Note: The patch installation will overwrite the local health factors with the national health factors if they already exist in your VistA system. However, the associated health factor category will be different and this will likely impact your clinical reminder processes.)

• This patch installs multiple national health factors. However, sites may have already locally built the two health factors required to be used at all facilities in accordance with VHA Handbook 1004.02, "Advance Care Planning and Management of Advance Directives." These are: <u>ADVANCE DIRECTIVE YES</u> and <u>ADVANCE DIRECTIVE NO</u>. Their national standardization is needed to support Meaningful Use certification of the VA electronic health record. This patch will either overwrite your local health factors with the same name or fail to import these two national health factors. These issues can be avoided by changing the local health factor names to something else (e.g. ADVANCE DIRECTIVE YES-LOCAL and ADVANCE DIRECTIVE NO-LOCAL.)

• If needed, change the name of your two local health factors, ADVANCE DIRECTIVE YES and ADVANCE DIRECTIVE NO, to something else (locally determined). This will allow the new health factors to be installed in your Vista system via this patch. Then, after the patch is installed, replace the locally developed health factors in your local reminder dialogs

and/or clinical reminders with the nationally provided health factors delivered via this patch. Adjust the resolution logic of any clinical reminders to use the new health factors going forward and locally developed health factors for historical instances. This will allow for the use of the new, national health factors in your local processes going forward. Changing the name of the Health Factors can be accomplished a couple of ways

1. Using fileman and editing the name of the health factor to include some local designation to differentiate them from the national Health Factors being installed
 2. Using menu option PXTT EDIT HEALTH FACTORS

4 Installation

This patch can be installed with users on the system, but it should be done during non-peak hours. Estimated Installation Time: 1-2 minutes.

The installation needs to be done by a person with DUZ(0) set to "@."

1. Retrieve the host file from one of the following locations (with the ASCII file type):

Albany	REDACTED	REDACTED
Hines	REDACTED	REDACTED
Salt Lake City	REDACTED	REDACTED

2. Install the patch first in a training or test account.

Installing in a non-production environment will give you time to get familiar with new functionality and complete the setup for reminders and dialogs prior to installing the software in production.

3. Load the distribution.

Using the Kernel Installation & Distribution System menu (XPD MAIN), LOAD the Distribution. Enter <your directory name>PXRM_2_0_57.KID at the Host File prompt.

Example

```
Select Installation Option: LOAD a Distribution
Enter a Host File: <your directory name>PXRM_2_0_57.KID
KIDS Distribution saved on
```

From the Installation menu, you may elect to use the following options:

4. Backup a Transport Global

This option will create a backup message of any routines exported with the patch. It will NOT back up any other changes such as DDs or templates.

a. Compare Transport Global to Current System

This option will allow you to view all changes that will be made when the patch is installed. It compares all components of the patch (routines, DDs, templates, etc.).

5. Install the build.

From the Installation menu on the Kernel Installation and Distribution System (KIDS) menu, run the option Install Package(s). Select the build PXRM*2.0*57 and proceed with the install. If you have problems with the installation, log a Remedy ticket and/or call the National Help Desk to report the problem.

```
Select Installation & Distribution System Option: Installation
Select Installation Option: INSTALL PACKAGE(S)
Select INSTALL NAME: PXRM*2.0*57
```

Answer "NO" to the following prompts:

```
Want KIDS to INHIBIT LOGONS during install?<sup>()</sup> NO
Want to DISABLE Scheduled Options, Menu #ed Protocols?
NO//
```

NOTE: DO NOT QUEUE THE INSTALLATION, because this installation asks questions requiring responses and queuing will stop the installation. A Reminders Manager or CAC should be present to respond to these.

Installation Example

See <u>Appendix A</u>.

6. Install File Print

Use the KIDS Install File Print option to print out the results of the installation process. You can select the multi-package build or any of the individual builds included in the multi-package build.

```
Select Utilities Option: Install File Print
Select INSTALL NAME: PXRM*2.0*57
```

7. Build File Print

Use the KIDS Build File Print option to print out the build components.

```
Select Utilities Option: Build File Print
Select BUILD NAME: PXRM*2.0*57
DEVICE: HOME//
```

8. Post-installation routines

After successful installation, the following init routines may be deleted:

PXRMP57E PXRMP57I

5 Post-Installation

5.1 VistA/CPRS Preparation

After the patch is installed, ensure that all health factors installed by this patch have populated into the VistA Patient Care Encounter package, including the correct health factor category (see <u>Appendix C</u> for a list of the expected health factors.) If applicable, your site will need to replace the locally developed health factors in your local reminder dialogs and/or clinical reminders with the nationally provided health factors (ADVANCE DIRECTIVE YES and ADVANCE DIRECTIVE NO) delivered via this patch. Adjust the resolution logic of any clinical reminders to use the new health factors going forward and locally developed health factors in your local processes going forward.

If you do not have a locally developed clinical reminder or reminder dialog template, you may link the associated reminder dialog template delivered with this patch to the new progress note title, ADVANCE DIRECTIVE NOTIFICATION AND SCREENING. You may also place this reminder dialog template in the Shared Templates section of CPRS Notes, for use with other progress note titles.

5.2 OPTIONAL - Set Up the Advance Directive Notification and Screening Progress Note Title in the VistA Text Integration Utility (TIU)

The Advance Directive Notification and Screening progress note title may be built using the Text Integration Utility in VistA. Note: The progress note title associated with this reminder dialog template must NOT be and should not be a CWAD posting progress note title.

Summary of actions:

- 1. Go into CPRS Configuration (Clinical Coordinator) Menu
- Follow the menu path: TIU Maintenance Menu > Document Definitions (Manager)
 > Create Document Definitions > Navigate to a locally developed progress note
 Document Class (*NOT a CWAD Document Class*) > Title > Advance Directive
 Notification and Screening

Select Display Sequence:
```

5.4 OPTIONAL - Link the Advance Directive Notification and Screening Progress Note Title to the VA-ADVANCE DIRECTIVE NOTIFICATION AND SCREENING Reminder Dialog

Once the VA-ADVANCE DIRECTIVE NOTIFICATION AND SCREENING reminder dialog template is imported via the patch and you have set up the appropriate progress note title, you may add the reminder dialog template to the notes tab in CPRS and link it to the Advance Directive Notification and Screening progress note title.

You will need the ability to "Edit Shared Templates" in CPRS.

Summary of actions:

- 3. Go into CPRS Notes tab
- 4. Follow the menu path: Options > Edit Shared Templates > Template Editor Window
- 5. In CPRS, from the Notes Tab
 - a. Select the drop down for "Options"
 - b. Select "Edit Shared Templates"
- 6. This will launch the "Template Editor" window.
 - a. Ensure that the box is checked for "Edit Shared Templates"
 - b. Select (single click) "Document Titles"
